Preface

This book consists of 26 papers based on lectures presented at the 7th International Conference on Applications of Magnetic Resonance in Food Science. The three-day conference, which was held for the first time in Denmark at The Royal Veterinary and Agricultural University in Copenhagen, attracted over one hundred participants from 20 different countries. The meeting continued the tradition of a friendly gathering with as much, or more, interchange of information during the social events as during the formal sessions. The conference was divided into 5 symposia covering (i) Sensory science, aroma and flavour, (ii) Authenticity and quantification of food, (iii) Functionality, structure and ingredients, (iv) Applications of solid-state NMR methods and (v) New NMR methods and instrumentation. The book follows the form of the conference, although some of the chapters do not necessarily suit the categories.

This year's meeting was subtitled *The Multivariate Challenge* in order to focus on the way in which the interpretation and quantification of magnetic resonance data of complex food systems increasingly requires the application of multivariate data analytical protocols. Since the discovery of the phenomenon of MR spectroscopy in the mid-1940's this technique has developed into one of the most versatile and information-rich analytical techniques. The possible applications range from probing free radicals to studies of dynamic processes in solution, from routine structure elucidation of small molecules to conformational analysis of macromolecules and from quantitative screening of authenticity to MR images of the human brain being impressed by flavours etc. Inspired by the rapidly expanding research field of *metabonomics*, which combines high throughput MR systems with *chemometrics*, it would appear as if the MR food application area is undergoing a transformation towards screening of bioactive components and exploration of functional factors in food. New high throughput instruments are now working intensively on measuring detailed fingerprints of raw materials, food components and final food systems. On-line systems are even being devised for rapid, non-invasive and total quality control. It would appear that hardware technology has evolved to an extent that data technology is becoming the limiting factor.

This collection of papers shows that MR in food science is at a highly sophisticated level and gives good indications of the continuing development towards analysis of larger and more complex food systems, the functionality of which can only be optimally extracted by advanced pattern recognition techniques. Before we know it, we may have developed *bromatonomics*.

We would like to express our deepest thanks to all the active participants, to the staff at Food Technology for hosting the conference, to the conference speakers whose work is documented by this book and to the RSC for making this book a reality. Special thanks are given to Associate Professor Frans van den Berg and Gilda Kischinovsky for help in editing the book.

1998: Norwich

2000: Aveiro

2002: Paris

2004: Copenhagen

Contents

Sensory Science, Aroma and Flavour

- fMRI and the Sensory Perception of Food 3
E.T. Rolls
- HR NMR to Study Quality Changes in Marine By-Products 11
E. Falch, T. R. Størseth and M. Aursand
- On the Use of Low-Field NMR Methods for the Determination of Total Lipid Content in Marine Products 20
G.H. Sørland, P.M. Larsen, F. Lundby, H.W. Anthonsen, B.J. Foss

Authenticity and Quantification of Food

- Advances in the Authentication of Food by SNIF-NMR 31
G. Martin
- HPLC-SPE-NMR: A Productivity Tool for Determination of Natural Products in Plant Material 39
J. W. Jaroszewski
- Applications of Hyphenated NMR to the Study of Food 47
M. Spraul, E. Humpfer and H. Schäfer
- Magnetic Resonance Measurements of Structural Changes during Heating of Chicken Meat by Hot Air 65
S.M. Shaarani, K.P. Nott and L.D. Hall
- MRI and NMR spectroscopy study of post-harvest maturing coconut 72
N. Nestle, A. Wunderlich, R. Meusinger
- Analysis of Blends of Raw Coffees of Arabica and Robusta Varieties through ¹H NMR and Chemometric Methods 80
L.A. Tavares, A.G. Ferreira, M.M.C. Ferreira, A. Correa and L.H. Mattoso

Functionality, Structure and Ingredients

- Use of State-of-the-Art NMR in Beer Production and Characterization 91
J. Ø. Duus
- Quantitative Measurements by MRI of Flow Velocity and Mixing Index in a Single-Screw Extruder 96
M. H. G. Amin, L. D. Hall, W. Wang and S. Ablett

ESR and NMR Spectroscopy Studies on Emulsions containing β -lactoglobulin and Oxidised Methyl Linoleate <i>N. K. Howell, S. Saeed and D. Gillies</i>	104
Paramagnetic Challenges in NMR Measurements of Foods <i>S. Alessandri, Francesco Capozzi, M. A. Cremonini, C. Luchinat, G. Placucci, F. Savorani and M. Turano</i>	113
Injection Flow NMR as a Tool for the High Throughput Screening of Oils <i>S. Rezzi, M. Spraul, D.E. Axelson, K. Heberger, C. Mariani, F. Reniero and C. Guillou</i>	124
Warping: Investigation of NMR Pre-processing and Correction <i>F. van den Berg, G. Tomasi and N. Viereck</i>	131
Applications of Solid-State Methods	
Multiexponential diffusion in meat at HIGH b-values by MRI <i>J.M. Bonny, V. Santé-Lhoutellier and J.P. Renou</i>	141
Study of Fat and Water in Atlantic Salmon Muscle (<i>Salmo Salar</i>) by Low-Field NMR and MRI <i>E. Veliyulin, I. G. Aursand and U. Erikson</i>	148
Slow-MAS NMR Methods to Study Metabolic Processes <i>in vivo</i> and <i>in vitro</i> <i>R. A. Wind, H. C. Bertram, and J. Z.Hu</i>	156
Proton Relaxation in Crystalline and Glassy Sugars <i>Peter Belton</i>	166
New NMR Methods and Instrumentation	
Towards On-line NMR Sensors <i>B.P. Hills and K.M. Wright</i>	175
Determination of the Apparent Diffusion Coefficient of Water in Red Blood Cells by High-Field PFG-NMR using Various Pulse Sequences <i>Y.S. Hong, S.O.Ro, H.K Lee, V.I.Volkov, and C.H.Lee</i>	186
A New Principle for Unique Spectral Decomposition of 2D NMR Data <i>R. Bro, P. I. Hansen, N. Viereck, M. Dyrby, H.T. Pedersen and S. B. Engelsen</i>	195
The Effect of Porous Structure of Rice on the Hydration Rate Investigate by MRI <i>A. Mohorič, J. van Duynhoven, G. van Dalen, F. Vergeldt, E.Gerkema, A. de Jager, H. Van As</i>	204
Oil Content Variations in Sunflower according to the Grain Orientation Comparatively measured by Spin-Echo and CWFP Sequences <i>A.D. Dumón, M.G. Albert, and D.J. Pusiol</i>	209

<i>Contents</i>	ix
Comprehensive Phase Compositional Analysis of Lipids in Foods by means of Time Domain NMR <i>E. Trezza, A. Haiduc, E.C. Roijers, G.J.W. Goudappel, J.P.M. van Duynhoven</i>	217
Two-Dimensional Laplace Inversion NMR Technique applied to the Molecular Properties of Water in Dry-Salted Mozzarella-Type Cheeses with Various Salt Concentrations <i>P.L. Hubbard, P.J. Watkinson, L.K. Creamer, A. Gottwald1 and P.T. Callaghan</i>	225
Subject Index	233
